

# HIGH PERFORMANCE CARPET PROTECTOR

## User Guidelines

Thank you for buying Hippo Carpet Protector.

- For best performance store and use in ambient conditions, ideally at room temperature for 24 hours prior to use.
- HIPPO Carpet Protector is generally suitable for all types of carpet however always test on a small non critical area first.
- Where lengthy projects are involved, we suggest replacing after 28 days to provide optimal performance and protection. In areas with high footfall, the film may need to be replaced more often.
- Before using on newly laid carpets where glue or adhesive has been used or where cleaning has taken place. For best performance allow vapours and moisture to dissipate, normally at least 72 hours.
- Film adhesion may be affected where carpets have been treated with stain protection.
- Please be aware that vapours from uncured concrete may cause discolouration of carpet fibres if the film is used before full curing has taken place.
- Direct sunlight and intense heat may adversely affect the performance of the film.
- This product is not suitable for use on rugs, loose fitting carpet tiles or worn carpets. The adhesive on this product is specially formulated just for carpets **DO NOT USE THIS PRODUCT ON A HARD FLOOR SURFACE**. For laminate, hard wood floors, natural stone and ceramic tiles always use HIPPO Hard Floor Protector.
- HIPPO Carpet Protector is for one time use only - remove and dispose of in accordance with local regulations.
